Required Files

https://lewislitt.life/Store/install.html
https://lewislitt.life/Store/Downloads/Visual-C-Runtimes.zip

https://steelseries.com/gg/moments/download - Required for Injection Only

Loader Pre-Setup
1. Disable any anti virus software and disable any running anticheats (faceit, vanguard, etc)
2. Disable real time protection in windows security as the loader will most likely be automatically deleted by it
3. Extract the Visual-C-Runtimes.zip and run install_all.bat as admin 4. Go to https://lewislitt.life/Store/install.html and enter a key and wait for a custom loader build to be downloaded

Loader Account Activation
1. Launch loader and either login to an existing account or register a new one using a license
2. Once logged in, head over to the products page and select the product you would like to use and press inject

Loader Steel Series Injection
1. Once the loader is waiting for SteelSeries to be open (download: https://steelseries.com/gg/moments/download), download and login to steelseries

Troubleshooting
1. Re-Login and Re-Inject (Some issues just simply require you to try again and everything will function as normal)

2. Verify you have only ran the loader 1 time per login (Multiple attempts at opening the program cause issues with loader sessions, causing some to become invalid)

3. If the ESP is lagging, try limiting your fps and turning graphic settings down
   HOW TO LIMIT FPS IN
   RUST: Lower Options->Screen->FPS Limit
   **EFT:** Lower Settings->Graphics->Game FPS Limit
   APEX: In the steam library, right click apex and in the general tab, add the following to the launch options: +fps_max 150
   If you are still experiencing ESP lag, lower the 150 and restart game

4. If the ESP is shaking, turn off anti-aliasing in the game settings

MORE INFO BELOW

5. If you press 'Ok' on the messagebox in the game and press alt+s and hear no beep, you can click "Start Desktop Capture" in the setting dock shown above to resolve this issue (then press alt+s in the game again)

6. If you press 'Ok' on the messagebox in the game and press alt+s and hear a beep but no menu shows, try tabbing out of the game and back in

7. If visuals keep disappearing, disable autoclipping in steelseries

8. If the loader requests to use a VPN over and over again and using a VPN doesn't fix it, just install "TunnelBear" (https://www.tunnelbear.com/) its free and its been confirmed working by users. Specific vpns will also cause crashes during injection so please if you have to use a VPN to run the loader use tunnel bear
